Facts and numbers in canton Zürich

- 100 000 t/a sludge formation with 20-40% DM in more than 70 waste water treatment plants
- 70 000 t/a sludge needs to be transported
- Approx. 1.3 Mio ton kilometers per year

Pilot test work October 2018 (Outotec/BAM)

In the framework of funded project CLOOP*

- Batch test work for process parameter optimizing
- Production of 1,5 t AshDec product
- Temperature: 850 – 1000 °C
- Additive: Natrium-Carbonate
- P_{NAC} extraction + P-Analysis during the test work
(3-4 hours between sampling and P_{NAC} result)
→ fast possibility to adjust process parameters

Target

- $P_{NAC} \sim 80\%$
- Stable conditions during the continuously running

Results

- P_{NAC} - very low variation even with process parameter variation
- PNAC solubility significantly above 80 %

Sludge incineration Zürich

- Successful in operation since 2015

AshDec

- Thermochemical process with alkaline compound
- Low residue amount
- Possible integration to incineration plant
- P recovery > 95 %
- P_{NAC} > 80 %
